

EASY FAIR T & S Fillers must be accurately weighed and mixed to obtain best results.

An easy method of mixing small quantities is to weigh the filler onto a board and mix with a flat trowel or filler knife by repeatedly drawing the blade over the material until it has an even colour. Apply the filler with a clean filler knife or plasterers trowel. It is worth investing in a good quality trowel with a smooth edge. A new trowel with a perfectly smooth edge will apply the filler much more smoothly than an old or poor quality one with a rougher edge and will make finishing the job much easier and quicker.
